

In the claims:

1. (Currently amended) An electrical device for attachment to a holder; ~~particularly in a vehicle,~~ wherein the electrical device (1) is attached to the holder (2) in a first connection by means of at least one hook (41, 42), wherein the electrical device (1) can pivot in relation to the holder (2) because the at least one hook (41, 42) can pivot in relation to the holder (2, 71, 72), and wherein the electrical device (1) can be locked to the holder (2) in a second connection (36, 50).

2. (Currently amended) The electrical device according to claim 1, ~~characterized in that~~wherein the at least one hook (41, 42) is provided on the electrical device (1, 31) and that a receptacle (71, 72, 81) for the at least one hook (41, 42) is embodied on the holder (2).

3. (Currently amended) The electrical device according to claim 2, ~~characterized in that~~wherein a pin (81) is provided on the receptacle (71, 72), that a hole (43, 44) for accommodating the pin (81) is provided in the hook (41, 42), and that the pin (81) secures the hook (41, 42) in the receptacle (71, 72).

4. (Currently amended) The electrical device according to ~~one of the preceding claims~~claim 1, characterized in that ~~in that~~wherein a top (31) of the electrical device (1) can be attached to an underside (70) of the holder (2).

5. (Currently amended) The electrical device according to ~~one of the preceding claims~~claim 1, characterized in that ~~in that~~wherein the electrical device (1) can be locked to the holder (2) by means of a pivoting catch (36).

6. (Currently amended) The electrical device according to claim 5, characterized in that ~~in that~~wherein the catch (36) engages an edge (50) of the holder (2).

7. (Currently amended) The electrical device according to ~~one of claims 5 to 6~~claim 1, characterized in that ~~in that~~wherein the pivoting catch (36) ~~that is preferably provided on the electrical device (1)~~ is disposed on a pivoting ratchet (35).

8. (Currently amended) The electrical device according to ~~one of the preceding claims~~claim 1, characterized in that ~~in that~~wherein the electrical device is provided with a detent mechanism that automatically engages with

the holder (2) in detent fashion when the electrical device is pivoted against the holder.

9. (Currently amended) The electrical device according to ~~one of the preceding claims~~claim 1, ~~characterized in that~~wherein the locking (35, 36, 50) of the electrical device to the holder (2) is secured by means of a lock (6, 37).

10. (Currently Amended) The electrical device according to ~~one of the preceding claims~~claim 1, ~~characterized in that~~wherein the electrical device (1) has at least one housing (30) and an electrical component (9), that the electrical component (9) is fastened inside the housing (30), and that the at least one hook (41, 42) is provided on the housing (30).

11. (Currently amended) The electrical device ~~according to one of the preceding claims~~claim 1, ~~characterized in that~~wherein the housing (30) of the electrical device (1) is at least partially covered with a protective layer (47) made of a plastic material.

12. (Currently amended) The electrical device ~~according to one of the preceding claims~~claim 1, characterized in that ~~that~~wherein a plug connection (40) is provided on a side of the electrical device (1) oriented toward the holder (2).

13. (Currently amended) The electrical device ~~according to one of the preceding claims~~claim 1, characterized in that ~~that~~wherein the electrical device (1) has at least one display unit (9), preferably a cathode ray tube display.

Claims 14 and 15 cancelled.

16. (New) The electrical device as defined in claim 7, wherein the pivoting catch (360 is pivotably provided on the electrical device.

17. (New) The electrical device as defined in claim 13, wherein the at least one display unit (9) is a cathode ray tube display.

18. (New) The electrical device as defined in claim , wherein the pivoting ratchet (35) is securable by means of a lock (37).

19. (New) A combination of a holder and an electrical device in a vehicle, comprising a holder; and an electrical device (1) attached to the holder (2) in a first connection by means of at least one hook (41, 42), wherein the electrical device (1) can pivot in relation to the holder (2) because the at least one hook (41, 42) can pivot in relation to the holder (2, 71, 72), and wherein the electrical device (1) can be locked to the holder (2) in a second connection (36, 50).

20. (New) The combination of the holder with the electrical device according to claim 16, wherein the holder (2) is mounted to the underside (3) of a vehicle roof, a luggage rack, a ventilation conduit.
